**All the Features You Need.
No gimmicks.**

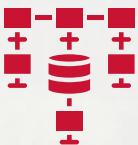

Flexibility and Reliability in a Sleek, Easy-to-use Package.

Don't be deceived by its small size: this **sleek unit** delivers robust performance, offering all the **advanced features and flexibility** today's modern installations demand, while being one of the most intuitive addressable fire alarm panels to work with.

Built-in LAN Network
Connectivity

Monitoring via Modbus
(over TCP/IP)

Wireless Flexibility
(Natron)

Cloud Connectivity

Cloud Connectivity

Stay in control, wherever you are.

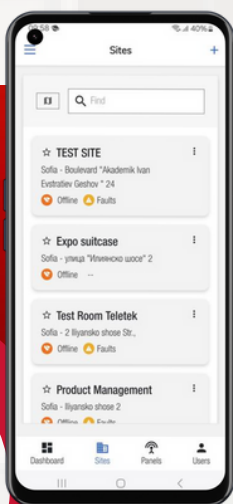

Simpo X offers you seamless system control and secure remote access through the cloud, ensuring you're always connected and in command.

Managing your systems is easier than ever!

Imagine a personal assistant that manages your schedule, handles paperwork, and even checks your installations remotely. That's exactly what Teletek Cloud brings to the table.

Built for installers, service teams, and building managers, it streamlines fire alarm maintenance with automated tasks, real-time monitoring, and remote diagnostics - whether you're on-site or on the move.

Wireless Flexibility

Wired? Wireless? Your choice.

With Simpo X, you get **seamless integration** with both wired and wireless devices, thanks to our Natron wireless solution.

This **flexibility** makes it easy to design and deploy systems that suit any environment or infrastructure, whether you're upgrading existing installations or building from scratch.

LAN Network Connectivity & Connection To Monitoring

Monitoring Software
(Modbus Protocol)

Ultimate connectivity

The built-in LAN network card unlocks the full potential of the Simpo X panel, by providing two more important functionalities:

- Connecting panels in a network over LAN/Ethernet
- The supported ModBus protocol allows connection to a monitoring and/or BMS software.
